

Fourth Minute

Project: HomeMaid Development

Date: 16/10/2024

Time: 18:00

Attendees:

Angela Ribeiro

Rita Silva

Hugo Castro

Regina Tavares

Agenda:

1. **Logo Design Discussion**
 2. **Reevaluation of Priorities**
 3. **Interface Design: Device Connection Tab**
-

1. Logo Design Discussion

Discussion:

The team initiated a conversation on the app's logo, emphasizing the need for a design that reflects both smart home functionality and the "maid" concept subtly. There was consensus that the logo should be minimalistic and modern, giving off a high-tech vibe while keeping the house as the focal point with subtle maid elements.

Challenges:

Finding the right balance between simplicity and recognition for users while ensuring the design works well as an app icon.

Conclusion:

Hugo Castro will explore more design options and present them at the next meeting. The team will provide feedback on these alternatives to finalize the logo in alignment with the overall product vision.

2. Reevaluation of Priorities

Discussion:

The product backlog was reviewed to reassess the priorities of previously defined tasks.

Challenges:

The integration of third-party devices remains a low priority, but more clarity is needed on how these integrations might impact other core functionalities in future sprints.

Conclusion:

It was agreed that while user-facing functionalities (like scheduling and device control) remain high-priority, more emphasis will be needed on security measures in the future sprints. Voice control features will continue to stay low priority for now.

3. Interface Design: Device Connection Tab**Discussion:**

The team reviewed ideas for implementing the user interface related to device connection. The interface should make it easy for users to connect new smart devices from various brands, with clear, guided steps to ensure user-friendliness.

Conclusion:

The interface should prioritize ease of use.
