

Tenth Minute

Project: HomeMaid Development

Date: 03/12/2024

Time: 19:00

Attendees:

- Angela Ribeiro
 - Regina Tavares
 - Hugo Castro
 - Rita Silva
-

Agenda:

1. Discussion on implementing add/remove device functionality.
 2. Possibility of adding the ability to add more rooms (low priority).
-

1. Discussion on Add/Remove Device Functionality

Discussion:

The team discussed the implementation of functionality to add and remove devices from the system. This feature was deemed essential for improving user control and flexibility in managing devices within the application. Given its importance, the team agreed to prioritize this functionality in the upcoming iteration.

Conclusion:

The implementation of add/remove device functionality will be prioritized for this iteration to align with project goals and user requirements.

2. Possibility of Adding More Rooms

Discussion:

The team evaluated the addition of functionality to create and manage more rooms within the application. While recognized as a valuable enhancement, the team agreed to classify this as a low-priority feature due to current resource constraints and the focus on higher-priority tasks.

Conclusion:

The ability to add more rooms will be addressed if time permits during this iteration; otherwise, it will be revisited in a future sprint.
